

DISTRIBUTION BIN

The distribution tank is intended for the even distribution of fuel. Fuel of a maximum humidity 30% is transported from the silo or filter to the distribution tank by means of screw or scraper conveyors.

Fuel is handled respectively of the purpose - for boilers, briquetting presses or truck loading system.

Advantages:

- even distribution of fuel
- durable construction
- dustproof construction
- easy operation

DISTRIBUTION BIN

Technical Data

Fuel moisture content	Max. 30%
Diameter x height x weight	900 mm x 900 mm x 260 kg 2000 mm x 2000 mm x 850 kg
Capacity	1.9 - 20 m ³ /h
Max. capacity	5.9 m ³
Motor	Range: 0.75 - 4kW depending on the capacity and material type
