

Hinnerup District Heating Plant

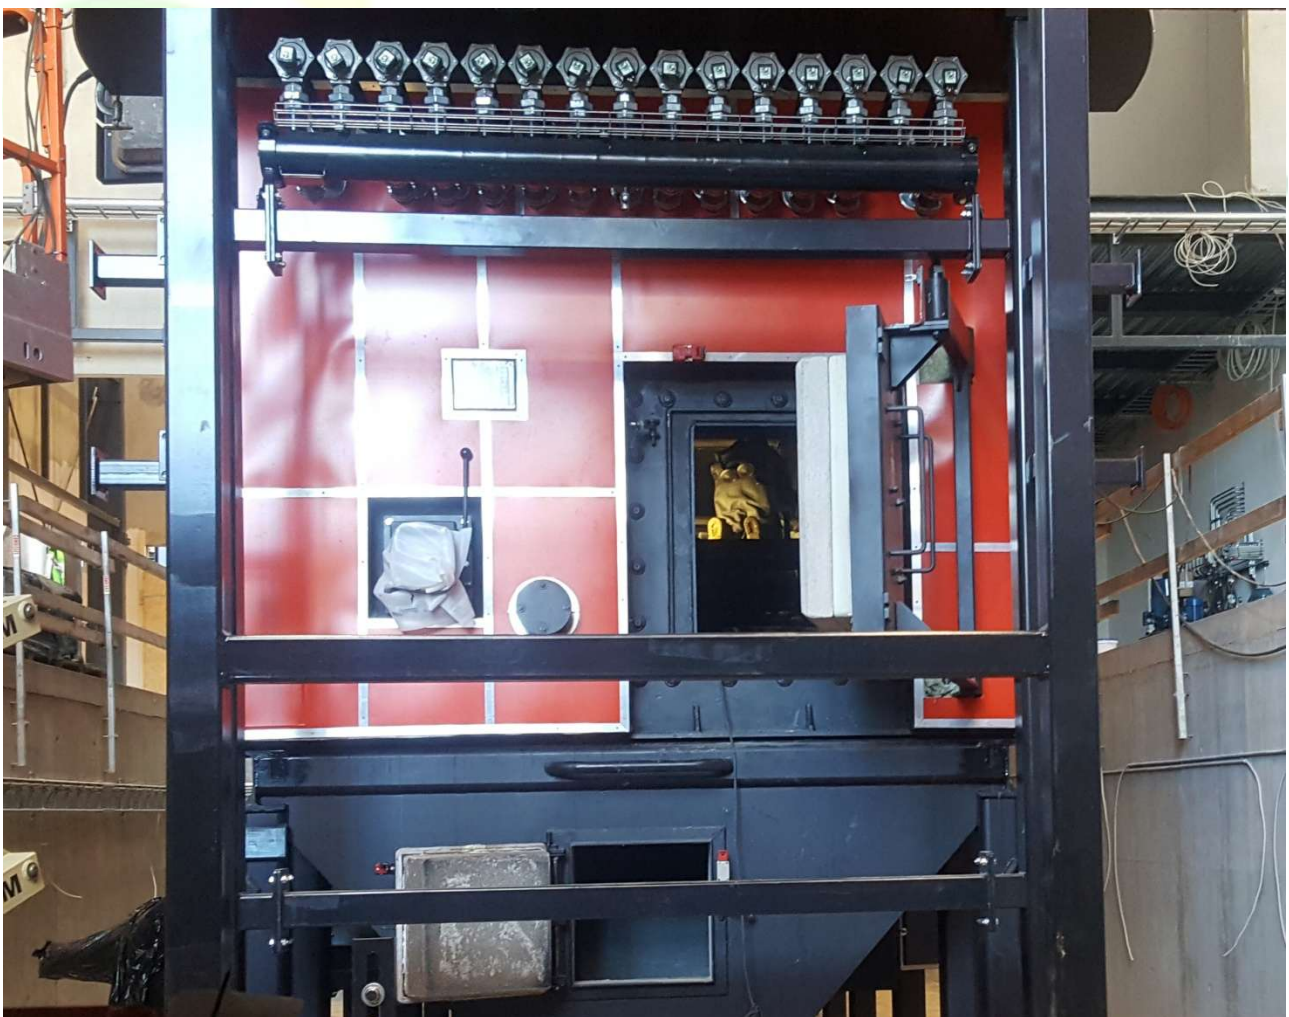

12Mw Straw-Fired Plant: From Project Takeover to Operational Service

The completion of the 12MW straw-fired power plant in Hinnerup, near Aarhus, became a critical race against time. We stepped in to lead the project following the bankruptcy of a previous contractor, swiftly restructuring the roadmap to safeguard both the schedule and the client's investment.

We designed and manufactured the complete straw bale distribution and dry ash handling systems. Beyond the hardware, we managed the full on-site installation and delivered complete technical documentation for the entire facility.

Picking up a project with so many loose ends was demanding, but it allowed us to turn uncertainty into future-proof solutions. We take great pride in the final result. The fact that this was just the start of a long-term and ongoing collaboration with Hinnerup shows that we cover everything from design to the finished, mounted product, as well as future service and maintenance.

The following gallery shows the on-site installation.
